

## Retro-Fit Surge Protection Boards

### MCU04/W/7 - 4 Way MCU c/w SPD-2PC2 & MD163B for TN-S System

Keep compliant with the 18th Edition, Cudis' solution to adding surge protection to installations which do not cater for the addition of surge devices or older installations, where there is simply no space available.

The Retrofit Surge Board can be added in parallel to your existing installation, either installed alongside your Consumer Unit / Distribution Board or at the District Network Operators (DNO) cut out, protecting the whole installation (distance permitting).

Comes complete with a pre wired Type II / Class 2 surge device (assembled to suit your earthing arrangement) and a 63A MCB for added protection and also to isolate the Surge Device for maintenance and testing purposes.

- 18th Edition Compliant 4 way metal Lumo unit.
- Pre-fitted surge protection device, 63A MCB, internal cables and busbar.
- Multiple knockouts all around the unit including the rear.
- Type II surge protection device with high arresting capacity up to 40kA (8/20µs).
