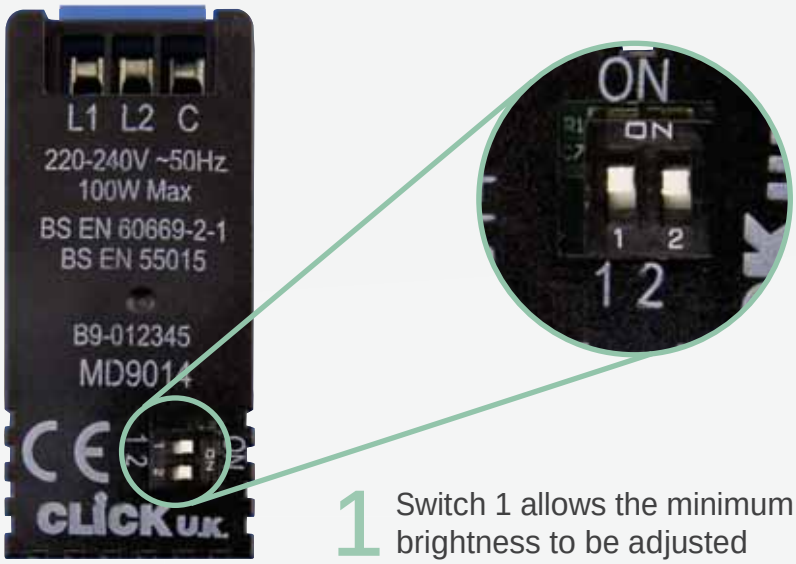
Scolmore® GROUP

ELIMINATE DIMMER FLICKERING



Easy To Program

Our new dimmer is much easier to program than regular dimmers because of the two small switches on the back of the module. This allows the dimmer to be programmed without removing from the plate.

1 Switch 1 allows the minimum brightness to be adjusted

2 Switch 2 allows the dimming mode to be adjusted

Small Module Size

- Can be placed above/below each other on multi-tier plates.
- Will fit into 25mm back box when used on raised plates.
- Will fit into 35mm back box when used on flat plates.
- Interchangeable with the MD9022 and MD9042 in our dimmer plates.

Fits into Minigrid® and Gridpro® mounting kits.

Thermal Overload Protection

If the module gets too hot it will cut out without damaging the internal electronics, allowing the module to cool down. This will not reset installation settings.
